

## MOVING AIR

### Ingredients

- Balloons
- String
- Tape

### Science Terms

- **Pressure** – The force produced by pushing or pressing on something.
- **Low-Pressure System** – A large, swirling mass of rising air that has low air pressure and that usually brings wet, stormy weather.

### Instructions

STEP 1: Inflate two balloons and then tie a string to each balloon.  
STEP 2: Suspend the balloons from the ceiling.  
STEP 3: Blow a stream of air between the balloons.

### Explanation

The stream of air flowing between the balloons creates less pushing power or less pressure between the balloons. With more pushing power on the sides, the balloons stay together.

## HOOKED ON SCIENCE DISCLAIMER

Each Hooked on Science experiment is safe to perform with an adult present. If not performed correctly the experiment could be dangerous. Jason Lindsey, Hooked on Science, and ALL Hooked on Science affiliates expressly disclaims all liability for any occurrence, including, but not limited to, damage, injury or death, which might arise as consequences of the use of any experiment(s) online or on air. The guardian of the child and the performer of the experiment assume all the liability and will use these science experiments at their own risk!
